

# **EXCALIBUR** FORAGE TEFF GRASS

- EXCELLENT FORAGE QUALITY & PALATABILITY
- IDEAL FOR HORSES AND OTHER LIVESTOCK
- HIGH YIELDING
- USE AS EMERGENCY CROP OR FOR DOUBLE CROPPING
- USE IN ROTATION WHEN REPLACING ALFALFA OR PERENNIAL GRASS

## A FORAGE KNIGHT IN SHINING ARMOR

**Excalibur** Teff is a new warm season annual grass variety developed for high forage production and forage quality without the problems of other summer annual grasses such as prussic acid or nitrate buildup. **Excalibur** makes the ideal hay for horses with excellent palatability, digestibility and a mineral content high in calcium and iron. **Excalibur** is widely adapted throughout the United States and will tolerate drought conditions as well as wet soils. **Excalibur** is a low input crop that has very few disease or pest problems and does not require high amounts of fertilizer for optimum production.

Enid, Oklahoma 73701 (580)249-4449

#### **PLANTING**

- Plant after all risk of frost has passed. Typically late May through late July. Teff does not germinate well in cool soils
- Seeding rate 8 to 12 lbs/acre for coated seed
- Broadcast or drill
- Firm seedbed
- Seeding depth 1/8 to 1/4 inch
- Emergence in 3 to 6 days under optimum conditions

#### **FERTILIZER**

- Teff needs adequate Phosphorous, Potassium and Sulfur
- 50 pounds of Nitrogen per acre at planting. Small amounts of N may be needed after each cutting, however too much N causes severe lodging

#### **HARVEST**

- For optimum quality, harvest in pre-boot to early boot stage, approximately 45 to 50 days after planting
- Harvest regrowth in 40 to 45 days depending on location and environmental conditions
- Cutting height 3 to 4 inches

#### TRIAL DATA
