PLUS

BERMUDAGRASS BLEND

- ❖ High Forage Production
- ❖ Widely Adapted
- ❖ Fast Establishment
- ❖ Excellent Winter Hardiness
- ❖ Early Spring Greenup

STAMPEDE **PLUS**

Stampede PLUS Bermudagrass Blend was formulated to combine the excellent winter hardiness and early spring green-up of the proven Wrangler variety with the fast establishing, fast producing Giant and CD90160 varieties. The result: a widely adapted, high producing forage blend that establishes quickly and handles the toughest stresses. Stampede PLUS is planted at 12 to 15 lbs/acre in the spring when the soil temperature reaches 65°F and on the rise. Take a soil test to check fertility and pH, and correct accordingly. Plant the seed at 1/8 inch in a firm seed bed with minimal residue.

	Wrangler	Giant	CD90160
Winter Hardiness	Excellent+	Poor	Good
Ease of Establishment	Good	Excellent	Very Good
Growth Habit	Semi-Erect	Erect	Erect
